HEAVY ARMORED CAR ADGZ

with T-26 Turret (field Mod.)

Developed by Austro-Daimler, the ADGZ armoured car with its 8x8 wheel formula, was the first four-axle all-wheel drive military vehicle in the world and the ancestor of the new generation of heavy armoured vehicles.

Well-armoured (a 20 mm cannon and three 7.92 mm machine guns) and armour-plated (armour plates up to 15 mm), with high manoeuvrability and speed (up to 70 km/h), ADGZ M-3T were added to the SS troops' arsenal in 1939.

At the end of 1941, after successful use in Polish (1939) and French (1940) campaigns, the order on ADGZ's was placed. The cars of the late (1940) production differed with strengthened armoring of external units and new 20 mm KwK 35L/45 gun.

After the invasion of the USSR a few ADGZ armoured cars were rearmed with turrets from the Soviet T-26 model 1933 light tank.

Between 52 and 63 armoured cars of this type were produced between 1935 and 1942 accordingly to various sources.
