1/48 Scale Plastic Model Kit

**ProfiPACK**  
edition

item No. 82139

**The Focke-Wulf Fw 190 was the best aircraft available to the Luftwaffe during the second half of the WW II. It soldiered in various modifications for many different tasks.**

The dedicated fighter version of Fw 190 was a high performance, heavily armed aircraft. To meet the 1938 specification issued by the Technisches Amt, RLM, the development team led by Kurt Tank ran into several difficulties, which were addressed continually during the process of the development. The first prototype took to the air on June 1, 1939 and after a series of improvements and, also after some quite radical changes, the design culminated during the fall of 1940, when twenty-eight units of pre-series Fw 190A-0 variant were built. Six of these were retained by the test unit Erprobungsstaffel 190 at Rechlin, tasked with service trials. The trials revealed a wide range of flaws to the point where the RLM halted further development. Nevertheless, as the test unit staff recommended, the design team was given another opportunity. After a series of some fifty modifications, the RLM gave the go ahead for the Fw 190 to be taken into inventory of the Luftwaffe.

#### Into combat

During June 1941, the Luftwaffe accepted the first of 100 ordered Fw 190A-1s, armed with four 7.9 mm MG 17 machine guns. The II./JG 26 was completely equipped with the type and operating on the Western Front by September 1941 and its operations changed the game in the area, as the new fighter was superior to the Hurricanes as well as to the Spitfires. The very first Fw 190 lost in combat was the Fw 190A-1 (factory No. 0028) flown by Gruppenkommandeur (Group Commander) of II./JG26 Walter Adolph. He was shot down on September 18, 1941.

During November of the same year the production of the next version Fw 190A-2 commenced. The new variant was powered by a BMW 801C-2 engine and armed with two 7.9 mm MG 17s and two MG 151s of 20 mm calibre in the wings. Part of this series received an additional pair of 20 mm MG FFs, thus attaining an armament standard of later types. A significant advancement to the design came in the spring of 1942, when the BMW 801D-2 engine became available. Its installation allowed new Fw 190A-3 variant to be entered and in July 1942 the development continued with the improved Fw 190A-4. Both were armed with what became the standard armament for future Fw 190s; i.e. two fuselage mounted MG 17s, two wing mounted MG 151 cannons, and two MG FF cannons, placed inboard of the wheel wells.

#### Mass production begins

During 1942 the production of Fw 190 had intensified, and another production facility was set up at Fieseler, where the "Würgers", as the Fw 190s were nicknamed, were built under license. Thanks to this step and to other measures, production rose in 1942 to 1,878 units, comparing quite amazingly to just 224 aircraft in 1941. Large-scale production of the Fw 190A-5 was initiated in April 1943 with an identical wing to the A-4 variant, but with a nose extension that would become standard on all subsequent Fw 190A versions up to the A-9, and on the corresponding F types. July saw the development of a new strengthened wing, which incorporated MG 151s instead of the MG FFs in the outer position. The adoption of this wing developed into the Fw 190A-6 version. Further

changes led to the Fw 190A-7, produced during the end of 1943. This version came about with the replacement of the fuselage mounted MG 17s with 13 mm MG 131s. Further improvements led to the Fw 190A-8, the variant, which became the most produced with some 6,655 units made. The most significant change was the installation of the GM-1 nitrous-oxide injection system, used for temporary power boost in combat. A portion of A-8 production was dedicated to the A-8/R2 or A-8/R8 variants, armed with MK 108 cannon in the outer wing location, and with armoured slabs added to the cockpit sides as well as to the modified canopy.

#### Last of the radial breed

The final production version of the BMW 801 engine powered fighter was the Fw 190A-9, equipped with the BMW 801TS of 2,000 hp (1,470 kW). There was a parallel development of these fighter-optimized aircraft with a dedicated fighter-bomber version, the Fw 190Fs. These aircraft had reduced wing armament to two MG 151 cannons in the wing root position. The engine was optimized for low level operation, and the armament options varied to satisfy the ground attack role, including bombs of various weight classes and a variety of anti-tank rockets. This branched into the extended range Fw 190G version. Development of the thoroughbred fighter continued in the guise of the Fw 190D, which began to reach Luftwaffe units in the second half of 1944 and was the result of mounting an in-line Jumo 213A-1 engine into a modified Fw 190A-8 airframe.

#### Reich defender

Although the Fw 190 never achieved the widespread usage of the competing Bf 109, its contribution to the German Air Force was certainly significant through the second half of WWII. Fw 190s saw service on the Western Front as well as in the East. As heavy fighters with imposing firepower, they found themselves integral components, from 1943 onwards, within the units tasked with the protection of the Reich from the ominous clouds of allied bombers. This is where the A-8 version was instrumental, along with its A-8/R2 armoured development. This version, with its firepower, was real threat and daunting foe for the bomber crews. From the second half of 1944, their danger was kept in check to a degree by escorting P-47s, and later by the P-51D Mustang.

#### This kit: Fw 190F-8

The Fw 190F-8 was dedicated ground attack fighter-bomber variant, directly developed from the A-8 fighter powered by BMW 801D-2 engine developing 1,677 hp (1,250 kW). The Fw 190F-8 had a slightly modified injector of the compressor, allowing for increased performance at low altitudes. The armament consisted of two 20mm MG 151/20 cannons in the wing roots and two 13 mm (0.51 in) MG 131 machine guns in the nose above the engine. There were four ETC 50 underwing racks, capable to carry bombs and rockets, while the ETC 501 fuselage centreline rack could serve as the provision for the bomb up to the 500 kg calibre.

This aircraft was found in Dolní Kamenice (the then Protectorate Böhmen und Mähren) at the end of the war after an emergency landing. It probably belonged to SG 10. Camouflage colors RLM 74, 75 and 76 is partly overpainted on the upper surfaces with dark paint, probably RLM 70. Yellow "V" and a band on the engine cover carried Luftflotte 4 aircraft since September 1944. This was identification introduced due to the Romanian Air Force, which joined the Allied forces and used German aircraft. From July 1944 to April 1945 the III./SG 10 was commanded by Hptm. Horst Steinhardt, former member of I./JG 2 "Richthofen" and Sch.G. 1. In the last weeks of the war, the unit was commanded by Major Arnulf Blasig. He flew Stuka bombers before the war and gradually served in St.G. 77, IV (Stuka) / LG 1 (later I./St.G. 5) and St.G. 51. He was awarded the Knight's Cross in September 1941 and completed a total of about 200 combat flights.

The aircraft is painted in colours of RLM 74, 75 and 76 with spots of green on the side of the fuselage. Due to night combat flights, it was probably equipped with a FuG 25a (IFF). Nachtschlachtgruppe 9 was formed in Italy at the end of 1943 and was used for night bombing missions using aircraft types Ju 87, Fiat Cr.42 and Caproni Ca 314. During 1944 the unit converted to Stukas completely. The only part of NSGr. 9, which received the Fw 190F planes in early 1945, was the 1<sup>st</sup> Staffel, which used F-8 and F-9 versions. Commander of NSGr. 9 was Obstlt. Dipl. Ing. Karl Vehmeyer, who previously led several Gruppen of Lehrgeschwader 1. From the autumn of 1944, Hptm. Karl-Heinz Kuhle the former Bf110 pilot of ZG 26, was commanding the 1./NSGr. 9 was.

# E Flown by Major Karl Schrepfer, CO of III./SG 1, Kraków, Poland, August 1944

The unit this aircraft belonged to, is tentatively identified as Stab III./SG 1, but it is just probable, not certain. This group was in fact renamed III./St.G. 1, the change occurred in October 1943. Until May 1944 the unit used Junkers Ju 87D-5 bombers, but from March it started to rearm with Focke-Wulf Fw 190s planes of A and G versions. In May the unit received the first aircraft of the F-8 version. Major Karl Schrepfer was the commander of the III./SG 1 from April 1944. He flew Stukas before the war and for the entire duration of his frontline service he was assigned to St.G. 1 (SG 1). He was deployed in the Battle of Britain, carried out raids on Malta, took part in the African campaign and from June 1941 fought on the Eastern Front. During the period from May 1943 to March 1944 he led two training units. Schrepfer completed approximately 800 combat flights and received Oak Leaves to the Knight's Cross as the last ground attack pilot on April 28, 1945. He died in an accident in September 1946 in Wertheim.

# F Stab SG 77, Schönfeld-Seifersdorf (Łukaszów), Silesia, August 1944

This aircraft probably belonged to the Stab SG 77. The fuselage marking indicate the wingman within the Geschwaderstab. The white E identifies the fifth wingman's machine. Stab SG 77 received Fw 190 F-8 planes in June 1944 and had six of them available. From February 1943 to November 1944, Oberst Helmut Bruck was commander of SG 77. He joined the Luftwaffe in 1935 and during whole frontline career served with St.G. 77 (SG 77). He was shot down during the attack against Poland on September 1, 1939 and was rescued by German tank crew. In August 1940 he took command of I./St.G. 77 and participated in the campaign against Yugoslavia and Crete. For the rest of his frontline service, he was deployed on the Eastern Front. Twice he landed in the enemy territory to pick up a downed crew. From January to April 1945, he commanded operational training unit SG 151. In April he was appointed General der Schlachtfliieger-Nord. He completed 973 combat flights, including 15 with Fw 190. He was awarded the Knight's Cross with Oak Leaves.

This aircraft took escaped from the Courland pocket in the Baltics on May 8, 1945, and landed in Glemminge (Ystad), Sweden, at 5:55 p.m. On board there were three members of the Luftwaffe – pilot Stabsfeldwebel Werner Skirlo, Fw. Johann Gruber and Fw. Adolf Karnel. Originally, they wanted to fly to the Danish island of Bornholm. Parts of the aircraft were handed over to the USSR in November 1945. Unusual camouflage with the colors RLM 74, 75 and 76 is supplemented on the upper surfaces with a dark color, probably RLM 70. The last commander of III./SG 3 was supposedly Hptm. Erich Bunge. He joined the army in 1935, first serving in the artillery, later in the reconnaissance aviation unit. From 1941 he worked as an instructor and in February 1944 became commander of the 5./SG 4. A month later he received the Deutsches Kreuz in Gold. In July 1944 he became commander of the training unit I./SG 151 and in March 1945 commanded III./SG 3 in Courland.
